

# LifeTop™ Cap

## Product Data Sheet

LifeTop™ Cap is a patented bottle closure, where sensitive powder ingredients are placed in a protective aluminium blister inside the cap. This protection makes the shelf-life considerably longer than if the ingredients are mixed into the drink. When the top of the LifeTop™ Cap is pushed, the blister breaks open and the powder is released into the beverage.

### Specification

The LifeTop™ Cap is a 1-piece 30 / 25 closure made of LDPE. The closure fits 30 / 25 high or low prolife PET neck finishes.

### Tamper evident protection

A tamper ring is separated from the closure when opened. A protective lid prevents accidental release of the ingredients.

### Colour

The LifeTop™ Cap comes in 6 different standard colours, red, orange, yellow, green, blue and gold.

### Blister

The blister is made of two aluminium foils creating true humidity and oxygen barriers.

The amount of powder possible to fill in each blister is approximately 200-250 mg depending on the powder characteristics.

### Ingredients

The LifeTop™ Cap is suitable for powder ingredients, ex. vitamins, minerals, probiotics, flavour and colour. The ingredient mix can be supplied by the customer or by CapAble. For more information see document LifeTop™ Cap ingredients.

### Directions for use

- Flip the protective lid open
- Push the top firmly as far down as possible
- Put the protective lid back
- Shake the bottle
- Unscrew the LifeTop™ Cap and drink or pour
